

Format CALL DISTANCE(#sprite-number,#sprite-number,
 numeric-variable[,...])

 CALL DISTANCE(#sprite-number,dot-row,
 dot-column,numeric-variable[,...])

Description

The only thing added by RXB to DISTANCE is the auto repeat.
See EXTENDED BASIC MANUAL page 80 for more data.
DISTANCE runs from ROM.

Program

The program at the right will		>100 CALL CLEAR
set up 3 sprites on screen and		>110 CALL SPRITE(#1,65,7,99,9
start them moving.		9,0,10,#2,66,4,99,99,10,0,#3
		,67,2,1,2,-50,-50)
Scans three sprites locations		>120 CALL DISTANCE(#1,#2,D,#1
and returns the distance from		,#3,E,#2,#3,F)
each other squared.		>130 DISPLAY AT(1,1):"#1/#2";
		D:"#1/#3";E:"#2/#3";F)
Restart loop		>140 GOTO 120

Options

While characters 144 to 159 are being used, you cannot use
sprites. The DISTANCE subprogram does get more accurate if
you have more than one to check at a time, but is slightly
faster than normal XB as DISTANCE in RXB does not require
a search for another line number to CALL DISTANCE and find
a value. The RXB version just goes to the comma and finds
the next value of DISTANCE, so is much faster and saves
program memory.
