

Format CALL F18UNLOCK

Description

The F18UNLOCK only does one thing send the command to unlock to the F18A allowing use of the Registers, GPU and memory. I did not name the subprogram F18A or F18B as it was assumed it was still named F18 over time despite alpha designation.

Programs

This line will unlock F18		>100 CALL F18UNLOCK
This line makes 28 sprites		>110 CALL POKER(30,28)
not flicker when sprites get		
overlapped.		
This line relocks the F18		>100 CALL POKER(50,128)

Options

F18 also can be programmed to run Assembly so check out the following RXB program in Documents and XB examples.
