

RXB FIXES TO XB REQUESTED BY USERS

RXB has numerous fixes thru the years a few will be mentioned here as far back as 1983 when I bought my TI99/4A.

Recently asked to fix RANDOMIZE SEED not working with the CALL LINK in XB, so I added a line to reset RANDOM SEED upon use of the CALL LINK. Your welcome.

RXB and XB had a issue with PRINT that worked fine in BASIC and a fix was made to solve this very rare issue. You might have seen it when edge characters were improperly shown.

CALL FILES(0) never worked in BASIC or XB but does work in RXB now. This meant a update to SIZE routine too.

Another XB bug was this example:

```
10 PRINT
LIST
ACCEPT A
```

Now a error is produced unlike version 110 XB crashes.
RXB shows this instead * Only legal in a program *

THANKS TO LEE STEWART

RXB 2022 has multiple routines now in Assembly to speed up these routines ALPHALOCK, CLEAR, CLEARPRINT, CHARSET, COLLIDE, INIT, HCHAR, HEX, ISROFF, ISRON, VCHAR, HPUT, HGET, ROLLDOWN, ROLLLEFT, ROLLDOWN, ROLLUP, SCROLLDOWN, SCROLLLEFT, SCROLLRIGHT, SCROLLUP, VPUT, VGET and the character loader all are Assembly in ROM. Expect next version of RXB to have even more Assembly for former GPL routines thanks to help from Lee Stewart. Specifically CLEAR, HPUT, VPUT, HCHAR, VCHAR, SCROLL, ROLL and CLEARPRINT are all speedy due to be Assembly now instead of GPL. Most recent additional Assembly was added to speed up CHARPAT, CHAR, CHARSET, COINC, COLOR, DELSPRITE, DISTANCE, JOYST, KEY, LOCATE, MAGNIFY, MOTION, PATTERN, POSITION, and SPRITE.

THANKS TO Tursi (Mike Brent)

RXB 2026 has added F18 support with CALL F18UNLOCK and CALL POKER using RXB routines VDPSTACK movement and CALL FILES(0) allows use of F18 GPU and additional memory use or running Assembly in F18
