

REA5

SYSTEM SUPPORT

supports

The modified version of the Editor/Assembler no longer

the 99/4 computer. A 99/4A is required. All TI BASIC support routines (CALL INIT, CALL LINK, CALL LOAD, CALL PEEK, CALL

PEEKV,

CALL POKEV, and CALL CHARPAT) have been removed from the Editor/Assembler. If you have a program that must be run from TI BASIC and requires these routines, you must plug an Editor/Assembler module into the cartridge connector. There are some assembly language programs that access data internal to the Editor/Assembler cartridge. These programs will not run correctly due to the re-structuring of the data in the Editor/Assembler module. For these programs you must use your Editor/Assembler cartridge. On the other hand like FunnelWeb REA loads the support routines before EA3 or EA5 loaders to engage, so C, FORTRAM, and FORTH will load from the EA5 prompt.

NO 32K NEEDED TO WHAT?

REA has been totally re-written so the user can now use some of the features of REA without that nasty *NO MEMORY

EXPANSION*

error turning up. The error routine only disallows the user from accessing those aspects of REA that absolutely needs 32K to work. The user may now use the REA EDITOR PRINT FILE menu, or use the x R X B file loader menu, or use D DIRECTORY menu. That means with RXB and REA the user can now print files, view files, load any BASIC or XB program and catalog from REA with or without a 32K memory.

EASTER EGGS

When on main menu of REA 2015 using keys 1 will still go to the Editor, 2 will still go to Assembler, 3 will still go to the Load and Run, and 5 will still go to RUN PROGRAM FILE. There are more to look for.
